## TREES FOR LONG

### STOCK LIST MARCH. 1910

# Vestbury Nurseries

ISAAC HICKS & SON

Westbury, Nassau County, Long Island, New York

#### BUSINESS TERMS

**PRICES.** The prices in this list are for trees and plants dug and loaded at Westbury Nurseries. Five, 50, and 500 plants at the 10, 100 and 1,000 rates, respectively. Selected specimens at advanced price, according to quality of plant chosen. Prices subject to change without points. without notice.

**DELIVERY.** Prices on ordinary-sized nursery stock are usually for stock dug and loaded at the Nursery. Delivery by wagon is charged according to distance and expense. Stock to be shipped by freight or express will be carefully packed in straw bales and boxes, charged at cost of material and labor. Delivery to railroad is free, where our responsibility ceases.

Large trees on a tree-mover, and large evergreens, are priced, by correspondence, as follows: (1) To include delivery and planting in hole prepared by us; (2) to include delivery and planting when hole is prepared and assistance rendered by purchaser; or, (3) delivery and planting charged by the day.

TERMS OF PAYMENT—Net Cash. Accounts will be subject to sight draft sixty days from the date of shipment. Unknown correspondents should send satisfactory reference or cash with order. Money orders may be obtained for Westbury, Nassau county, New York.

WE DESIRE THAT ALL OUR CUSTOMERS BE FULLY SATISFIED, and wish to be promptly notified of any errors, that they may be rectified. We do not agree to consider complaints later than ten days after delivery.

TRUE TO NAME. Without boasting infallibility, we warrant our stock true to name, and will replace any that may prove otherwise, or refund the original price, but we will not be held responsible for more than the original price of the trees.

SUBSTITUTION. Late in the season we may be out of some varieties and sizes of fruit and other trees, and will substitute similar varieties and sizes unless otherwise ordered.

**GUARANTEE.** The living of trees is largely dependent upon conditions of weather and after-care beyond the nurseryman's control; therefore, we do not guarantee trees to live after leaving the Nursery in good condition, without previous agreement and special price. If guarantee is desired, customers are requested to so state when asking prices.

OBJECT OF THIS PRICE-LIST. By giving quantities in this list, our aim is to enable customers to order stock on hand, thus avoiding delay and disappointment. It shows dimensions of large specimens in sizes never before offered by nurseries, which save from fifteen to forty years of waiting. In offering smaller and cheaper stock, grown from Long Island and Northern seed, that fits the conditions and is hardy, we enable the purchaser to obtain results with the minimum outlay.

Address all orders to Isaac Hicks & Son, Westbury, Nassau County, New York. Local and long-distance telephone, 68 Westbury. Telegraphic address, Westbury, New York.

For large trees, see Ash, Birch, Catalpa, Elm, Linden, Maple, Oak, Poplar, Tulip, Cedar, Fir, Hemlock, Pine, Retinispora, Spruce. For larger trees and varieties not listed, write us.

> For prices of large trees delivered and planted write us, stating if holes will be dug or men furnished to assist in planting.

> > Photographs mostly by J. H. McFarland Co., Harrisburg, Pa.

The White and English Ash offered at \$40.00 to \$50.00 per 100. Trunks straight, good roots, cheap. Good low priced trees for real estate subdivisions. On the left White Spruce collected in Maine. (See page 2.)

American Beech. They could not be better trees. This is how we root prune them, one-half this year and the other next year. Now that we make them sure to live you can have Beeches as readily as Maples. (See page 2.)

Large White Birch moved from our nursery to shade the residence of Mr. Marshall C. Lefferts, Lawrence, L. I. There are several more like it in the nursery. They are good companions of our big Pines and Cedars. (See pages 2 and 3.)

The big Catalpa in the right foreground is No. 1509D, 32 feet high, 14½ inches diameter, 15 feet spread, price \$45.00. The next on the left foreground is No. 1510D, 30 feet high, 11 inches in diameter, 15 feet spread, price \$35.00. The tree on the left is 32 feet high, 14 inches in diameter, 12 feet spread, price \$45.00.

To deliver and plant either of these within 15 miles, will cost about \$25.00. The hole should be prepared 22 feet wide and 1½ feet deep. (See page 3.)

Hornbeam hedging in our nursery photographed in February. Some of the russet leaves stay on all winter. As these get older and broader they will make an efficient screen to laundry yard or service court. They are cheaper than evergreens and less commonplace than Privet. (See page 4.)

Magnolia Tripetala. This is the way we deliver them and they are sure to live. Our collection contains some of the cheapest, rarest and most beautiful Magnolias. (See page 8.)

Large-leaved Magnolia. The largest hardy flower. Fifteen inches in diameter. It is very rare in nurseries and we have an excellent stock at low rates. (See page 8.)

These are our large Norway and Sycamore Maples, 20 to 30 ft. high, 5 to 8 inches in diameter, 8 to 15 ft. spread. To deliver and plant three trees within fifteen miles will cost about \$21.00. To pack in straw bales for shipment by rail will cost about \$15.00 for three trees. (See pages 9 and 10.)

This is how we trim our large trees to make them symmetrical. The poles measure height and spread. You can get uniform matched trees for avenues.

This is small leaf Linden 18049, 28 feet high, 9½ inches in diameter, 14 feet spread.

This is why our big trees thrive. Smaller trees do not quickly overtake them. We dig under the roots, dissect them out with picking bar and fork, and deliver ten times as many roots as usual. You may think them expensive but this is why.

This bundle contains two Maples, 22 feet high,  $5\frac{1}{2}$  inches in diameter, 10 feet spread of roots and top. Cost of bundle about \$6.00. Weight about 600 lbs. Freight rate to New York, 14 cts. per 100 lbs.; Philadelphia, 29 cts.; Pittsburgh, 52 cts.; Orange, N. J., 17 cts.; Albany, N. Y., 41 cts.

You save ten years over the usual size nursery tree,  $1\frac{1}{2}$  inches in diameter.

The higher prices for Cedars are for trees of fairly dense foliage and usually with foliage down to within two feet of the						
ground. They are mostly trees which have been in the nursery three to six years. The lower price is for less perfect trees.						•

One of our blocks of Pin Oak, 20 to 30 feet high. Big broad, beautiful trees in the best condition to grow vigorously on your lawn. They ship readily because the branches tie down like an umbrella. (See page 10.)

This is a Pin Oak 5 feet high at \$30.00 per hundred, or \$250.00 per thousand. They are vigorous, stocky trees with a bundance of fibrous roots.

This is a Red Oak 5 feet high at \$45.00 per hundred. This is a good size to plant. They will grow 3 feet or more per year equalling Norway Maples.

This is a detail in the pine forest shown below. They are White Pines and White Oaks, two of the best trees for nine-tenths of Long Island. They help each other and are not really slow if you let them alone and allow the fallen leaves to fertilize the ground.

This is a pine forest planted, in 1893, with White Pines, 2 year seedlings, 3 inches high. In 17 years they are 25 to 30 feet high, 8-11 inches in diameter. It was sandy hillside, abandoned and growing Blackberry and Bayberry bushes. View on the grounds of Mr. E. D. Morgan, Wheatly Hills, L. I. (See page 20.)

The Hemlocks below are five car loads collected in November, 1909. They have wide balls of fibrous roots in leaf mould. We			
consider their chances of living to be good if they are watered. The tops are dense and bushy, because they have grown wide			
apart in full sunshine. There are several more car loads up to 20 feet high, root pruned and sheared, that will be ready in

1 ft. high 2 ft. high			

Red Cedar 7 feet high. This tree has just been sheared, resulting in a hard outline. Next year it will be dense and graceful. We have hundreds like this. (See page 16.)

This is a Nordmann's Fir 5 feet high. Our stock has been repeatedly root pruned to check the formation of a tap root, which makes it difficult to transplant some of the firs. (See page 16.)

White Spruce. The little tree on the right is 1 foot high. We have five thousand at \$12.00 per 100 or \$100.00 per thousand. At this price the roots are puddled in mud as shown on page 38 of "Trees for Long Island." We strongly advise the purchase of this stock for hedges, belts of evergreens for windbreak, and for seaside planting. The tree on the left is 4 feet high. (See page 24.)

Oriental Spruce 6 feet high. Note how bushy and solid these are. The big ball of earth is carried on a heavy platform.

This species is the darkest green Spruce. We have the largest size trees on the market. (See page 25.)

Colorado Blue Spruce 4 feet high. We deliver with much larger balls of earth than usual. This carries the tree through the first summer drought, and groups of our evergreens do not look newly planted. (See page 25.)

Engelmann's Spruce 4 feet high. These are very solid, dense trees as handsome as the Colorado Blue Spruce.

They are hardy long-lived trees from the Rocky

Mountains. (See page 26.)

Taxus cuspidata, var. capitata. This is one of several hundred plants we have raised from seed of an old tree at Dosoris, the estate of the late Charles A. Dana. (See page 26.)

Taxus repandens. This rare variety is hardy. These are old plants we secured with many other rare evergreens when the Parson's Nursery at Flushing was discontinued. (See page 26.)

Our stock of White Spruce contains this vast quantity of sturdy, little plants, which are all ready for transplanting. We offer them at low rates because we have grown them cheaply and because we wish this excellent species to become popular. They will make a denser windbreak on a small area than any other evergreen. They are just the right size for economical handling, and yet they are big enough to plant in their permanent locations and thrive without any care. If you have a sandy bluff their roots are deep enough to hold. If you wish a hedge as cheap as California Privet and as handsome as an evergreen hedge can be, these are the trees to plant. We do not know that good stock has ever been offered as cheaply as this. (See page 24.)

Norway Spruce 3 feet high. These plants have been sheared and recently transplanted so that they are in perfect condition. At \$40.00 per hundred they are an excellent value. The White Spruce shown above, however, are better as they will be in good condition 15 years later when the Norway Spruce will be ragged. (See page 24.)

White Pine 2 months old with fine gravel. This is our discovery for raising seedling evergreens in this climate where a few foggy days cause a damping-off fungus to rot off the young seedlings when they are a few days old. With a few exceptions in the west, the nurserymen of this country have not raised everygreens from seed. The result is that the less desirable evergreens which grow from cuttings or are imported and which turn brownish-green in winter or winter kill have been extensively planted and the owners of country estates have become prejudiced against evergreens.

The most serious result is that evergreens have not been grown cheaply for forest planting. Lumber will rapidly increase in price until forest fires are checked, natural reproduction favored and land worthless for other purposes planted. There are several fallacies presented against forest planting. One is that concrete, steel and other materials will take the place of wood. Has the human race ever discarded the use of any material? The fallacy that forestry should be left to the Government is answered by the fact that the Government does not own and is not likely to own the majority of the land which will grow trees more profitably than anything else.

ernment does not own and is not likely to own the majority of the land which will grow trees more profitably than anything else.

If you have a thousand acres suitable for White Pine, collect the cones in September. 1910 will be a good seed year. Plant in April and cover with half inch of clean gravel. Shade with lath screens the first summer. Plant when two years old, 6 to 10 feet apart, keep fire out for forty years and harvest the crop. Removing the mystery and imaginary difficulties of growing timber is an important educational step in the development of forestry in this country. There are millions of acres in this country that can be more profitable in forest than in any other way. Individuals and corporations will derive a steady income from such forests. If the managers study the trees and not the manipulations of the stock ticker, the forest will pay.

Removing the burlap from under the ball of earth. It is no harm if the soil crumbles. It has kept the roots moist and unbroken.

Planting a Pine tree without a ball of earth. Sift mellow earth between the roots and pack firmly. A pail of water will help, but is not essential.

We have several acres of White Pines like this in our nursery. They are 6 to 9 feet high and have been growing wide apart for the past six years. They are vigorous trees with excellent roots. At 6 ft. high, where you want the screen, the foliage is broader and more dense than usual because we have trimmed them. At the prices we quote, they will make one of the biggest masses of evergreen foliage you can get for the money. Still cheaper are trees like the one in the foreground, which are thin or bare at the base, and which are offered at a lower price; that is, this tree 7 feet high is \$1.50. (See page 20.)

Note the extra large balls of earth on these trees. Would you not rather receive such a load than a box as in the foreground, with small balls of earth or no earth on the roots? We have sent out thousands of tons of good soil on the roots of our evergreens and it is the most satisfactory department because there are the least losses. As usually handled, evergreens are the most risky class of nursery stock, and not enough of them have been planted.

Mountain Laurel or Kalmia as collected from Long Island woods. This often looks thin after transplanting, but it will thrive if cut back and heavily mulched with leaves. In partially open situations it blooms more freely than in the shade. In the background are Cedars planted by our tree-movers. (See page 40.)

Rhododendrons in our Nursery. These plants are grown in full sunshine and fully exposed to the winter. They are not as handsome as freshly imported plants, but they are well set with bloom buds, have large balls of roots enabling them to live in our dry climate and are sure to thrive if you will give them their principal requirement—just leaves for a mulch.

If you are afraid that the colors will not harmonize, come and study our color photographs taken by the Lumiere process, or come and study them when in bloom in June. They can be safely planted then. (See pages 40 and 41.)

This screen of shrubs, Pine, Birch and Maple, separating the lawn from the flower garden. We have material to produce such results immediately. If properly fertilized, the foliage should be dense the second year.

Japanese Snowball bordering a grove of Maples, Oaks, Pines and Firs. This is the best way to encourage trees to grow rapidly. The shrubs hold the leaf mould and shade the ground. As a result the trees grow twice as fast as when on the bare lawn,

If the trees are on a bare lawn, manure them annually in a circle as wide as the top.

Rhodotypos Kerrioides. These are the big, solid plants we offer at very low rates. If it had a common name it would be as popular as other shrubs.

Our list of shrubs contains many items at bargain prices. Look it through and you will find the big shrubs cheap and the small sizes lower than usual. They are easy for you to grow.

Viburnum dilatatum. View in the garden of Captain Aaron Ward, Roslyn, L. I. This is Viburnum dilatatum or Japanese Bush Cranberry. Our stock are broad, solid plants like this, even in the winter they are beautiful because of the pearly-gray haze of the twigs. The foliage is as dense and dark as the California Privet. Bright red berries all winter.

On the right is Forsythia viridissima or Golden Bell. (See page 30.) On the left is Silver Thorn or Eleagnus umbellata. We recommend it strongly for mass planting on the seashore and on sandy ground. Our stock is transplanted, of good quality and offered at low rates. (See page 30.)

Wistaria speciosa, var. magnifica. Late-flowering American.	Wistaria speciosa, var. magnifica. Late-flowering American.		9 5	9 00	

A group of Rosa rugosa on the shore, where it grows well in sandy soil. (See page 41.)

Rosa multiflora on the edge of woodland. In the background are large Silver Maples, Red Maples and Pin Oaks 30 to 45 feet high, which we planted to thicken up the edge of the woods and to replace dead Chestnut trees. Residence of Mr. F. Gray Griswold, Roslyn, L. I.

A hardy flower garden on Long Island. On the left are German Iris, Day Lily, Foxglove, Golden Glow and Phlox. On the right Paronies are just coming into bloom, A grove of Pines, Oaks and Maples separate it from the lawn and drive.

## Hardy Garden Flowers

Our plants are all field-grown, and are nearly all large clumps, larger than usually sold. Note also the low prices at which they are offered. This permits their use in large quantities for naturalizing, cover planting, and large groups in shrubberies. Lower rates on large quantities of our selection.

D. delicata	25		\$1 25 1 25	
Dicentra spectabilis. Bleeding Heart	50	20	1 50	0.0
A delicate fern-like plant, generally admired by those who see it in our Nursery. It is suitable for planting in the woods and also fulfills all the requirements of a garden	250	. 10	80	\$6 (
plant, as it has good foliage and flowers all summer.				
Dictamnus fraxinella. Gas plant	50	20	1 50	
Digitalis (Foxglove), Pink and Rose	800	10	80	5 (
White	360	12	1 00	8 (
This stately plant is very showy in the garden and is	300	12	1 00	0 (
equally appropriate for naturalizing among trees and shrubs.				
Doronicum plantagineum excelsum	250	20	1 50	
Eryngium amethystinum	25	15	1 25	
Eupatorium cœlestinum. Hardy Ageratum	45	10	80	6 (
Funkia ovata. Blue Day Lily	150	10	80	6 (
P. lancifolia	85	10	80	6 (
P. lancifolia variegata	80	15	1 25	8 0
subcordata grandiflora	164	15	1 25	10 (
This is offered at so low a rate that the opportunity should be taken to plant it in quantitiy. Its ivory white flowers appear for a long time during midsummer.	101	10	1 20	10 (
Faillardia grandiflora. Blanket flower	400	10	0.0	
There is no plant in the garden to which one may go with more confidence of always finding good cut-flowers	400	10	80	6 (
than to this. The stems are long and the rich bronze, red and yellow flowers will harmonize with most interiors.				
	0.0	10	1 00	
Gentiana Andrewsii. Closed Gentian	30	12	1 00	8 (
typsophila paniculata. Baby's Breath	100	15	1 25	
Ielenium autumnale superbum. Sneezeweed	11	15	1 25	
celianthus Maximiliana. Sunflower	100	10	80	5 (
This is unusual in gardens, and will be welcomed for its late bloom after hard frosts as well as for its intrinsic beauty.				
L. mollis	75	10	80	5 0
. orgyalis	25	15	1 25	
: rigida, var. Miss Mellish	10	15	1 25
